

| Question | Answer   |
|----------|--|
| 1        | <p>a) Two more circles are added each time.</p> <p>b) </p>  |
| 2        | <p>a) Two more squares are added each time.</p> <p>b) </p>   |
| 3        | <p>a) One more square and one more triangle is added each time.</p> <p>b) </p>  |
| 4        | <p>a) 3 more circles are added each time.</p> <p>b) </p>  |
| 5        | <p>a) 4 rectangles are added each time.</p> <p>b) </p>   |
| 6        | <p>a) Three circles are added, then four, then five etc. A new row is added to the triangle each time.</p> <p>b) </p> |
| 7        | <p>This could be seen as two squares added each time or the number of squares being tripled each time.</p>   |
| 8        | <p>Answers vary depending on the number of circles drawn in the first term. Amir could have given this information to help.</p>  |
| 9        | <p>Various answers depending on the sequence chosen. The number of blocks should decrease from term to term.</p>   |

| Question | Answer  |
|----------|---|
| 1        | a) 1, 3, 6<br>b) 10<br>c)    |
| 2        | a) 3, 5, 7, 9<br>b) 11<br>c) 13<br>  |
| 3        | 5 triangles and 16 lines<br>   |
| 4        | a) Annie might think that the number of circles doubles each time. Dexter might think that 3 circles are added each time. Both could be correct.<br>b) If we had 3 terms, we'd know if the rule was add 3 each time or double each time. This is because we could compare the difference on two occasions, rather than having to make a prediction using just 1 difference. |
| 5        | Dora is not correct. In the 6 <sup>th</sup> diagram there will be 13 squares and not 14 squares.<br>   |
| 6        | a) 1, 2, 3<br>b) 10<br>c) 6, 10, 14<br>d) 42<br>e) 402  |
| 7        | It's not possible to draw the 6 <sup>th</sup> term of the sequence as there would be no more squares left to reduce the vertical columns<br>   |

| Question | Answer   |          |    |    |    |      |   |      |    |          |   |    |    |      |   |   |    |
|----------|--|----------|----|----|----|------|---|------|----|----------|---|----|----|------|---|---|----|
| 1        |  <p>Three visual sequences are shown, each with a corresponding table:</p> <ul style="list-style-type: none"> <li><b>Blue dots:</b> 1 dot, 3 dots, 6 dots. Table: Position (1, 2, 3), Term (3, 5, 7).</li> <li><b>White squares:</b> 2 squares, 5 squares, 9 squares. Table: Position (1, 2, 3), Term (3, 6, 10).</li> <li><b>Purple dots:</b> 3 dots, 6 dots, 10 dots. Table: Position (1, 2, 3), Term (1, 3, 5).</li> </ul>  |          |    |    |    |      |   |      |    |          |   |    |    |      |   |   |    |
| 2        | <p>a)</p> <table border="1" data-bbox="297 689 661 824"> <tr><td>Position</td><td>1</td><td>2</td><td>3</td></tr> <tr><td>Term</td><td>4</td><td>7</td><td>10</td></tr> </table> <p>b)</p> <table border="1" data-bbox="297 855 661 990"> <tr><td>Position</td><td>1</td><td>2</td><td>3</td></tr> <tr><td>Term</td><td>5</td><td>9</td><td>13</td></tr> </table>  | Position | 1  | 2  | 3  | Term | 4 | 7    | 10 | Position | 1 | 2  | 3  | Term | 5 | 9 | 13 |

| Term     | 0.4   | 0.8      | 1.2 | 1.6 |   |   |   |      |    |    |    |    |   |          |   |   |   |   |      |     |     |     |     |

| Question | Answer   |
|----------|--|
| 7        | <p>Alex is correct.<br/>We only have one difference so we don't know if there is a constant difference.<br/>We would need 3 terms to know if a sequence was linear or non-linear, as this would give us two differences and we could see if they are constant or not. Therefore, it is impossible to tell what type the sequence is.</p>   |
| 8        | <p>a) 75, 225, 375<br/>b) 75, 225, and the third term is any number other than 375 (if the sequence is 3 terms long only)</p> <p>There is only one answer for part a) as you have to add on the same amount each time.<br/>For b) there are an infinite number of answers as the difference could be any number.<br/>In part a) the 5<sup>th</sup> term would be 675.<br/>For part b) there could be many answers for the 5<sup>th</sup> term if there is a pattern (e.g. doubling each time). If the sequence is random, then the 5<sup>th</sup> term can't be predicted.</p> |

Y7 – Autumn – Block 1 – Step 5 – Continue linear sequences Answers

| Question | Answer   |
|----------|--|
| 1        | <p>a) 162, 189, 216<br/>                     b) 1300, 1500, 1700<br/>                     c) 1, 1.2, 1.4<br/>                     d) 2.2, 1.86, 1.52<br/>                     e) 4, 0, -4</p>  |
| 2        | <p>a) 538, 565, 592, 619, 646<br/>                     b) 44, 63, 82, 101, 120<br/>                     c) Yes, there could be 2 sequences in each case. This is because we are told the constant difference, but not whether the sequence is ascending or descending.</p>   |
| 3        | <p>a) 3000, 3250, 3500, 3750, 4000<br/>                     b) 3000, 2750, 2500, 2250, 2000<br/>                     In each case there is only one possible answer as we are given the constant difference and told whether the sequence is ascending or descending.</p>  |
| 4        | <p>a) 100, 99, 98, 97, 96<br/>                     b) 10, 9.9, 9.8, 9.7, 9.6<br/>                     c) Each term in part a) is 10 times bigger than the corresponding term in part b).</p>   |
| 5        | <p>a) You can only create one sequence as you have to subtract 7 each time.<br/>                     b) You can create 2 linear sequences as you could add 7 each time, or subtract 7 each time.<br/>                     c) You can create an infinite number of linear sequences starting with 59 as you can choose from an infinite number of constant differences.<br/>                     d) You need at least 2 terms to continue a linear sequence (if you are told it is linear).</p> |
| 6        | <p><math>100 - 28 = 72</math></p>  |
| 7        | <p>a) 1.6, 2.1, 2.6, 3.1, 3.6, 4.1, 4.6, 5.1<br/>                     b) There is always a 1 or a 6 in the tenths column. It is not possible to have an integer in this sequence as you would need to add either 0.4 or 0.9. Since the constant difference is 0.5 this is impossible</p>   |
| 8        | <p>There are lots of possible answers, here are 2 examples:<br/>                     3.0, 3.5, 4.0, 4.5, 5.0, 5.5<br/>                     10.9, 10.4, 9.9, 9.4, 8.9, 8.4</p>  |

| 7        | Lots of possible solutions, 2 examples are:<br>4, 0.4, 0.04, 0.004<br>4, 0.04, 0.0004, 0.000004   |     |     |     |     |     |     |   |   |   |   |   |   |   |  |   |    |    |    |   |  |   |    |    |     |   |  |    |    |    |     |

Y7 – Autumn – Block 1 – Step 7 – Explain the term-to-term rule Answers

| Question | Answer   |
|----------|--|
| 1        | a) Linear, subtract 8 each time<br>b) Non-linear, divide by 2 each time<br>c) Non-linear, multiply by 3 each time<br>d) Non-linear, total the 2 previous differences and then add to the previous term<br>e) Linear, add a half each time                                      |
| 2        | a) Rosie has added 4 each time instead of multiplying by 4 <b>or</b> Rosie has been multiplying the position number by 4 rather than the previous term.<br>b) 4, 16, 64, 256   |
| 3        | Double the previous difference and then add onto the previous term <b>or</b> double the previous term each time.   |
| 4        | a) 1, 1, 2, 3, 5, 8, 13, 21<br>b) 9 <sup>th</sup> term which is 34   |
| 5        | a) They could all be correct because a minimum of three terms are needed to determine the term-to-term rule of a sequence.<br>b) Whitney<br>c) Teddy, Alex and Annie<br>d) Alex's sequence will have the greatest 5 <sup>th</sup> term as she is using the highest multiplier. |
| 6        | Multiply by 2 then subtract 100  |

Y7 – Autumn – Block 1 – Step 8 – Find missing terms Answers

| Question | Answer   |
|----------|--|
| 1        | Dora's correct as the sequence goes up by 9 each time  |
| 2        | a) <b>Sequence A:</b> 100, 92, 84, 76, 68, 60<br><b>Sequence B:</b> 18, 35, 52, 69, 86, 103<br>b) <b>Sequence A:</b> 28<br><b>Sequence B:</b> 171  |
| 3        | a) 1<br>b) 7 <sup>th</sup> term  |
| 4        | a) 4, 16, 28<br>b) 4, 10, 16<br>c) 4, 8, 12, 16<br>d) 4, 7, 10, 13, 16<br>e) 97, 92, 87, 82, 77<br>f) 4000, 4300, 4600, 4900, 5200, 5500   |
| 5        | a) 1, 10, 100, 1000, 10000<br>b) 500, 100, 20, 4   |
| 6        | a) 7<br>b) 10 <sup>th</sup><br>c) 20 <sup>th</sup>   |
| 7        | 41   |
| 8        | a) 24, 80, 136, 192, 248<br>b) 24, 48, 96, 192, 384<br>Many different sequences can be created, for example:<br>24, 192, 24, 192, 24   |
| 9        | a) Many possible answers:<br>2, 10, 18, 25<br>2, 6, 10, 14<br>2, 3, 4, 5, 6, 7, 8<br>b) 100, 5, 100, 5<br>100, 95, 90, 85, 80, 75, 70, 65, 60, 55, 50, 45, 40, 35, 30, 25, 20, 15, 10, 5<br>100, 5, 0.25, 0.0125<br>c) Compare answers with a partner. |
